ABSTRACT

Blockchain technology is an enabler of value transactions on decentralized, secure databases (ledgers). Despite still being in its early stages, we expect blockchain's impact on business and society to be disruptive. We provide a theory-based examination of blockchain technology's transformational impact from a business model and ecosystem perspective to accelerate the debate on its potential effects. By conceptualizing blockchain's key features through the lens of value, actor-network and contract (property rights) theories, we develop a theoretical framework for analyzing the implication of blockchain technology on value creation.

INTRODUCTION

Blockchain plays a big role in these developments thanks to its ability to decentralize data and processes while also ensuring top-tier security. Indeed, blockchain technology is largely considered to be a huge part of the future of business thanks to its applications in supply chains, healthcare, insurance, travel, retail, and even energy. Like all new technologies, it also comes with some disadvantages and limitations.

There is concern among some groups that blockchain may produce incredible benefits for business but destruction for the environment. While there is some truth to the argument in specific contexts, the wider application of blockchain could also prove the reverse is true: blockchain could be one of the biggest enablers of sustainability currently available.

In an increasingly digitalized economy and society, the security and accountability of data transactions are critical elements for creating trust and enabling breakthrough innovations in the digital world. In this regard, blockchain technology could be a game-changer, with the potential to revolutionize processes from finance to pharmaceutical industries, from government public services to humanitarian work and development aid. The blockchain serves as the base technology for cryptocurrency, enabling open (peer-to-peer), secure and fast transactions. The application of blockchain has expanded to include various financial transactions (e.g., online payments and exchange platforms) as well as Internet of Things (IoT), health systems and supply chains. However, issues associated with scalability, privacy concerns, uncertain regulatory standards and difficulties posed by the technology in integration with existing applications are some of the potential market constraints. There is also the risk that the potential of blockchain for solving developmental problems has been somewhat inflated by its early adopters and the tech media and may not be as applicable for developing and least developed countries.

OUR MISSION

Our Mission is to change people lives through ground breaking and innovative solutions

OUR VISION

It has been founded with the intention to change the industry, out of passion and striving for greater achievements

ABOUT TRONADO

We are a community of cryptocurrency enthusiasts focused on building a community with a utility ecosystem for blockchain powered platforms. We aim to provide liquidity which supports the TRONADO eco-system. We also work hard to support new and upcoming projects in the cryptocurrency sphere and see genuine projects achieve success.

The TRDO t is the that fuel the crypto eco - system of tronado community. The community are the liquidity provides that help build and grow the platform.

FEATURES OF TRONADO

STACKING

Stacking unlike its staking counterparts which works with purchasing and then staking proof-of-stake tokens to earn a return denominated in the same assets, allows TRDO holders to earn reserved currencies (BNB, TRDO, PANCAKE and other stipulated currencies for holding TRDO. This reward and consensus mechanism provides a more direct way for holders to earn other cryptocurrencies as well as TRDO.

TRONADO LOTTERY

Our lottery is another fun game that enables participants to earn a considerable amount of Tronado. Users can participate by depositing a small amount of TRDO that enables them purchase the lottery ticket thereby contributing to the lottery pool. The user can get more tickets to increase his chances of winning and if the user is lucky to win the jackpot, a huge amount of TRDO goes to him!

CROSS-CHAIN SWAPPING

Tronado was envisioned as an independent but complementary system to the existing Binance Smart Chain network. Multiple-chain architecture is used, with the idea being that users can seamlessly transfer assets from one blockchain to another. In this way, rapid trading can be enjoyed on the Tronado network. With this interoperability, users are exposed to a vast ecosystem that can cater to a myriad of use cases.

Tronadous uses the same functions as its Binance counterpart, and can be swapped for BEP-20 tokens.

TRONADO GAMES

The introduction of the Tronado Games allows users to hatch and earn more Tronado every few days. This tends to keep the community active and also encourages hodlers to participate in the developments proposed by the development team. The top hodlers are incentivised with the opportunity to earn more Tronado by claiming extra rewards every few days.

TRONADO MARKET PLACE

Now Fungible Token (NFT) is a phenomenon that has gained attention in the cry to sphere over the past few years with increasing acceptance and use cases. The Tronado NFT market place will allow the users and community to display their artwork which can be bid and purchased as NFT are singularly owned by the buyer and has a unique identity code implanted on the image or artwork.

The Tronado network will enable users to open their own market place on the platform.

Limited editions of collectible NFT cards will be created and marketed by our team of talented artists as well as other community members.

EXCHANGE

Token swaps on Tronado are a simple way to trade one BEP-20 token for another via automated liquidity pools. Our exchange platform is an automated market maker ("AMM") that enables two tokens to exchange on the Binance Smart Chain. Different tokens are traded and exchanged on our platform. The automated Market Maker (AMM) model means that while you can trade digital assets on the platform, there isn't an order book where you're matched with someone else. Instead, you trade against a liquidity pool already on the platform. Those pools are filled with the funds from other users. They deposit into the pool, receiving liquidity provider (or LP) tokens in return. They can also use those tokens to reclaim their share of funds with a portion of the trading fees.

E-COMMERCE

The Marketplace function is the main function of the app, that is, it provides the possibility to buying and selling of any kind of Product or Service either digital or Physical in a totally anonymous and secure way (Guaranteed through an automated Escrow service).

QR CODE CRYPTO POS PAYMENT SOLUTION

Point of Sale services and QR code Reading would be employed in payment processing. This will be similar to the QR code use in cryptocurrency wallets but would contain all necessary payment details for easy, reliable, efficient and secure transaction processes.

VIDEO DATING

Our platform will offer dating services using blockchain and smart contract to ensure POS security and privacy of users. Users are easily searched and contact other users on the dating platform without violating privacy rules as the whole process will be regulated using blockchain technology and smart contract, also users will be allowed to give permission or access as the deem fit.

This increase trust, ensures users privacy and promotes decentralization.

NFT PLATFORM

NonFungible Token (NFT) is a phenomenon that has gained attention in the crypto sphere over the past few years with increasing acceptance and use cases. The BirbNFT market place will allow the users and community to display their artwork which can be bid and purchased as NFT are singularly owned by the buyer and has a unique identity code implanted on the image or artwork.

The Birb network will enable users to open their own market place on the platform.

Limited editions of collectible NFT cards will be created and marketed by our team of talented artists as well as other community members.

HOW IT IS WORK?

Liquidity Providers enjoy cash back bonus on their activated packages. Also get earnings in TRONADO TOKEN. Experienced team of TRONADO use the funds to provide liquidity, grow TOKEN value and build TRONADO TOKEN Products.

Three simple steps are employed in our community:

- ◆ Become Liquidity Provider
- ◆ Earn Tronado Tokens
- ◆ Enjoy Affiliate Bonuses

TOKENOMICS

Token Name:	TRONADO TOKEN
Token Abbreviation:	TRDO
Total Supply:	500 Million
Network:	BEP20
Decimal:	18
Current Trading Pair:	Usdt / Inr / Btc / BNB / Eth

TOKEN DISTRIBUTION

- ◆ 75 % public sale
- ◆ 10% Exchanges & Development
- ◆ 5% influencers
- ◆ 10% Founding Team

ROAD MAP

- 1** (Q3 -2020)
Launch of community building
- 2** (Q2 -2021)
Listing on public exchanges
- 3** (Q2 -2021)
E-commerce platform
- 4** (Q3 -2021)
Video Dating platform
- 5** (Q4 -2021)
Cryptocurrency Exchange
- 6** (Q1 -2022)
Blockchain lottery and gambling
- 7** (Q2 -2022)
NFT platform
- 8** (Q3 -2022)
QR code POS solution
- 9** (Q4 -2022)
Global presence in all major exchanges

CONCLUSION

The mass adoption in cryptocurrency has resulted in many use cases and areas being explored. These potentials that exist is made more valid with the increase in the adoption and use of Decentralized Finance. We are a community that has a long-term plan with many use cases sequences in a logical and achievable order.

Our protocol ensures security, transparency and decentralization which are the key features of blockchain. We tend to grow a community with a genuine intention of succeeding in the crypto sphere.
